

kafka

Just for learning kafka

1. start server

```
UUID=$(sudo bin/kafka-storage.sh random-uuid | awk '{print $1}')
sudo bin/kafka-storage.sh format -t $UUID -c
config/kraft/server.properties
sudo bin/kafka-server-start.sh config/kraft/server.properties
..
```

2. create a topic

```
```sh
sudo bin/kafka-topic.sh --create \
 --bootstrap-server localhost:9092 \
 --partitions 1 \
 --replication-factor 1 \
 --topic test-topic-2
```

## 3. Producer Console

```
sudo ./bin/kafka-console-producer.sh \
 --bootstrap-server localhost:9092 \
 --topic test-topic-1
```

## 4. Consumer Console

```
sudo ./bin/kafka-console-consumer.sh \
 --bootstrap-server localhost:9092 \
 --topic test-topic-1 \
 --from-beginning
```

## 5. Start Producer & Send message using key so that it will distribute among both partitions

```
sudo ./bin/kafka-console-producer.sh \
 --bootstrap-server localhost:9092 \
 --topic orders
--property parse.key=true
--property key.separator=:
```

## 6. Create Two consumers connected to topic part of same group

```
sudo ./bin/kafka-console-consumer.sh \
 --bootstrap-server localhost:9092 \
 --topic orders \
 --group waiters
```
